

Pod PCB, 1:1 fit test (top view)

Print: A4, scale **100% / Actual size** (not "Fit to page").

Check: the board must measure **52 × 109 mm**, and the line below it 100 mm.

Test 1, Pico 2 W: lay the paper on a piece of cardboard or foam. Press the Pico's header pins through the two rows of circles at the top. All 40 pins should go straight through, with the antenna end over the notch.

Test 2, screen: press the screen module's 14-pin header through the long row below the Pico, then check the 4 SD pins land on the short row at the bottom, and the module's 4 corner holes line up with the 4 big circles.

Test 3, edges: USB-C (bottom left) and the headphone jack (bottom right) should sit at the bottom edge; the slide switch and the button at the left edge.

If any pin misses by more than about half a hole, stop and send me a photo before ordering.

100 mm check line: must measure exactly 100 mm. If not, the print was scaled.
